"Say goodbye to your typical way of working.."

Formulation Creation

Receta offers a unique 'formulation planner' where new formulations can be trialled without any impact on existing data. We also include help with dosage requirements, as well as auto calculations for fillers and lubricants.

With all productions, documentation, pricing management and stock requirements all being handled from a single source of data - modifications to existing formulas and the ramifications of a change become unbelievably easy to manage.

Production Management

Still managing your production resources via spreadsheets and drawn-out production planning meetings with several members of staff?
With Receta, that can be a thing of the past! Our system comes with a comprehensive series of planning tools including a simple to use drag-and-drop interface for capacity management, automatic stock batch allocation, fully traceable production management including capsule weight checks, real-time yield projections and more!

Document Creation

Receta makes all documentation management a breeze with it's comprehensive automatic PDF creation features. No longer will you have separate formulation certificates, stock container labels, manual sales sheets or any other document you currently have to manage manually with spreadsheets, word processed documents etc.

The data you input into Receta automatically flows to these documents which can be produced real-time, on demand, at the click of a button. Change the data and the document changes automatically to suit!
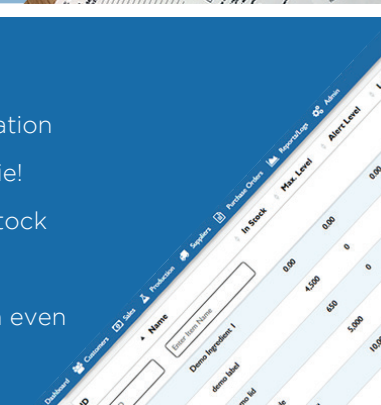

Stock Management & Traceability

With a full purchase order suite, real-time stock reports per material and automatic allocation of stock batches to productions, receta will make handling your stock levels as easy as pie! Automate checking material expiry dates, calculating purchase trends, and understand stock discrepancies with Receta's comprehensive reporting toolkit.
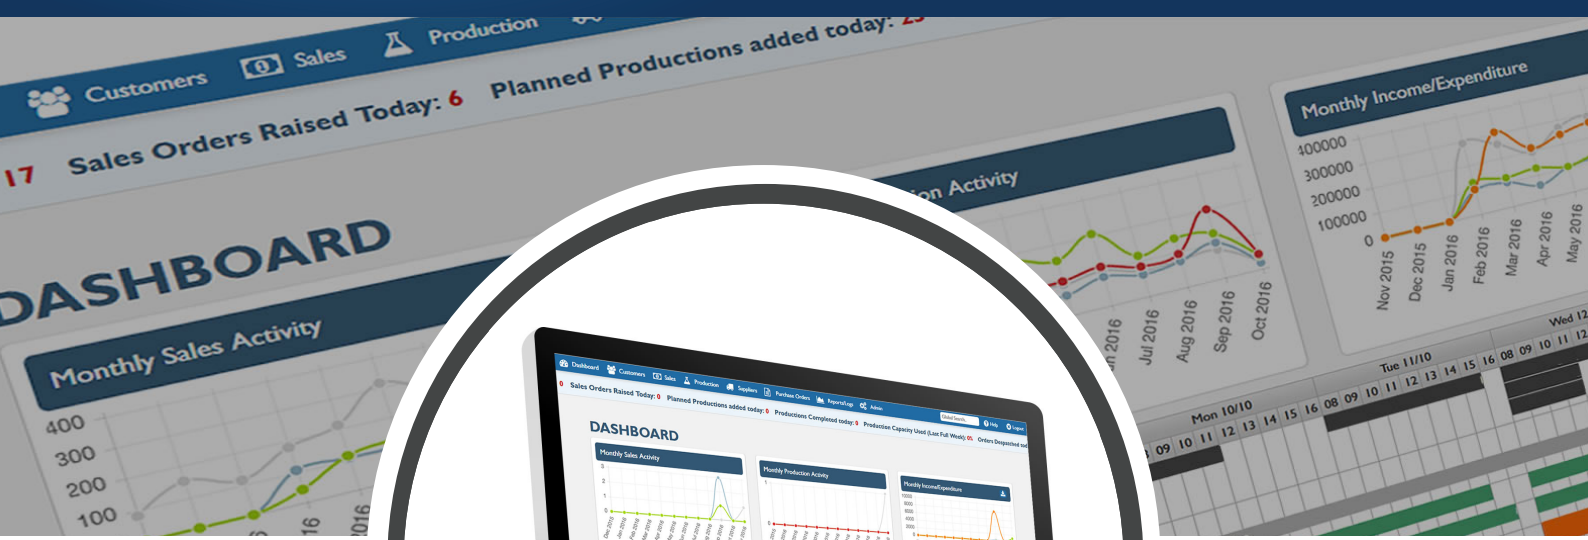

Receta also includes a huge suite of reports to fulfill any traceability requests you have in even of product recalls, purchase evaulations, non-conformance issues and more.

94%
of our clients reported a drop in production errors within 1 month!

Saving Money

You can be confident that you can save your business significant staffing and management costs by introducing Receta and removing up to 90% of the tasks you currently manage in other ways.

Productivity Improvements

By managing work flows from a single source of data, you will benefit from a large reduction in production errors. Entire jobs are managed from simple clicks with very little staff training required.

Customer Communication

Receta's unique automated customer notifications keep your clients informed at all times of the progress of orders without you needing to send a single email or make a single telephone call!

100%

of our clients reported that the costs of implementation of Receta had been re-couped within 3 months

www.receta.co.uk/freetrial

"Receta has been designed to run on virtually any PC, Mac, Laptop, Tablet or Smart-Mobile."

As Receta is a cloud-based solution, this means you only need an internet browser to use the software.

In fact the only 'requirement' you may have over a basic internet connected device would be if you wished to take advantage of the printable documents Receta produces (PDF).

An addtional benefit of being cloud-based means that should you have several premises or team members working remotely, all of your staff can use the system without any additional IT support.

Your IT hardware costs going forward will be significantly reduced and your IT support team can focus on maintaining your internal network rather than installing, bug hunting and updating software products.

Requirements

Browser:
- ✔ Internet Explorer
- ✔ Edge
- ✔ Firefox
- ✔ Safari
- ✔ Chrome
- ✔ Opera

Operating System:
- ✔ Windows
- ✔ OSX
- ✔ iOS
- ✔ Android

Receta can be customised per user, giving you granular control over their access to each individual specific page/action within the system.
